Jain**

Director,  
Strategic Partnerships  
Interra Systems

# Your Session Hosts

## Agenda

- **Background**
  - Foundation for Modern Supply Chain
  - Delivering a Modern Media Supply Chain
  - 11 Step Guide to Business Efficiency
- 

# Importance of Next Gen Supply Chain

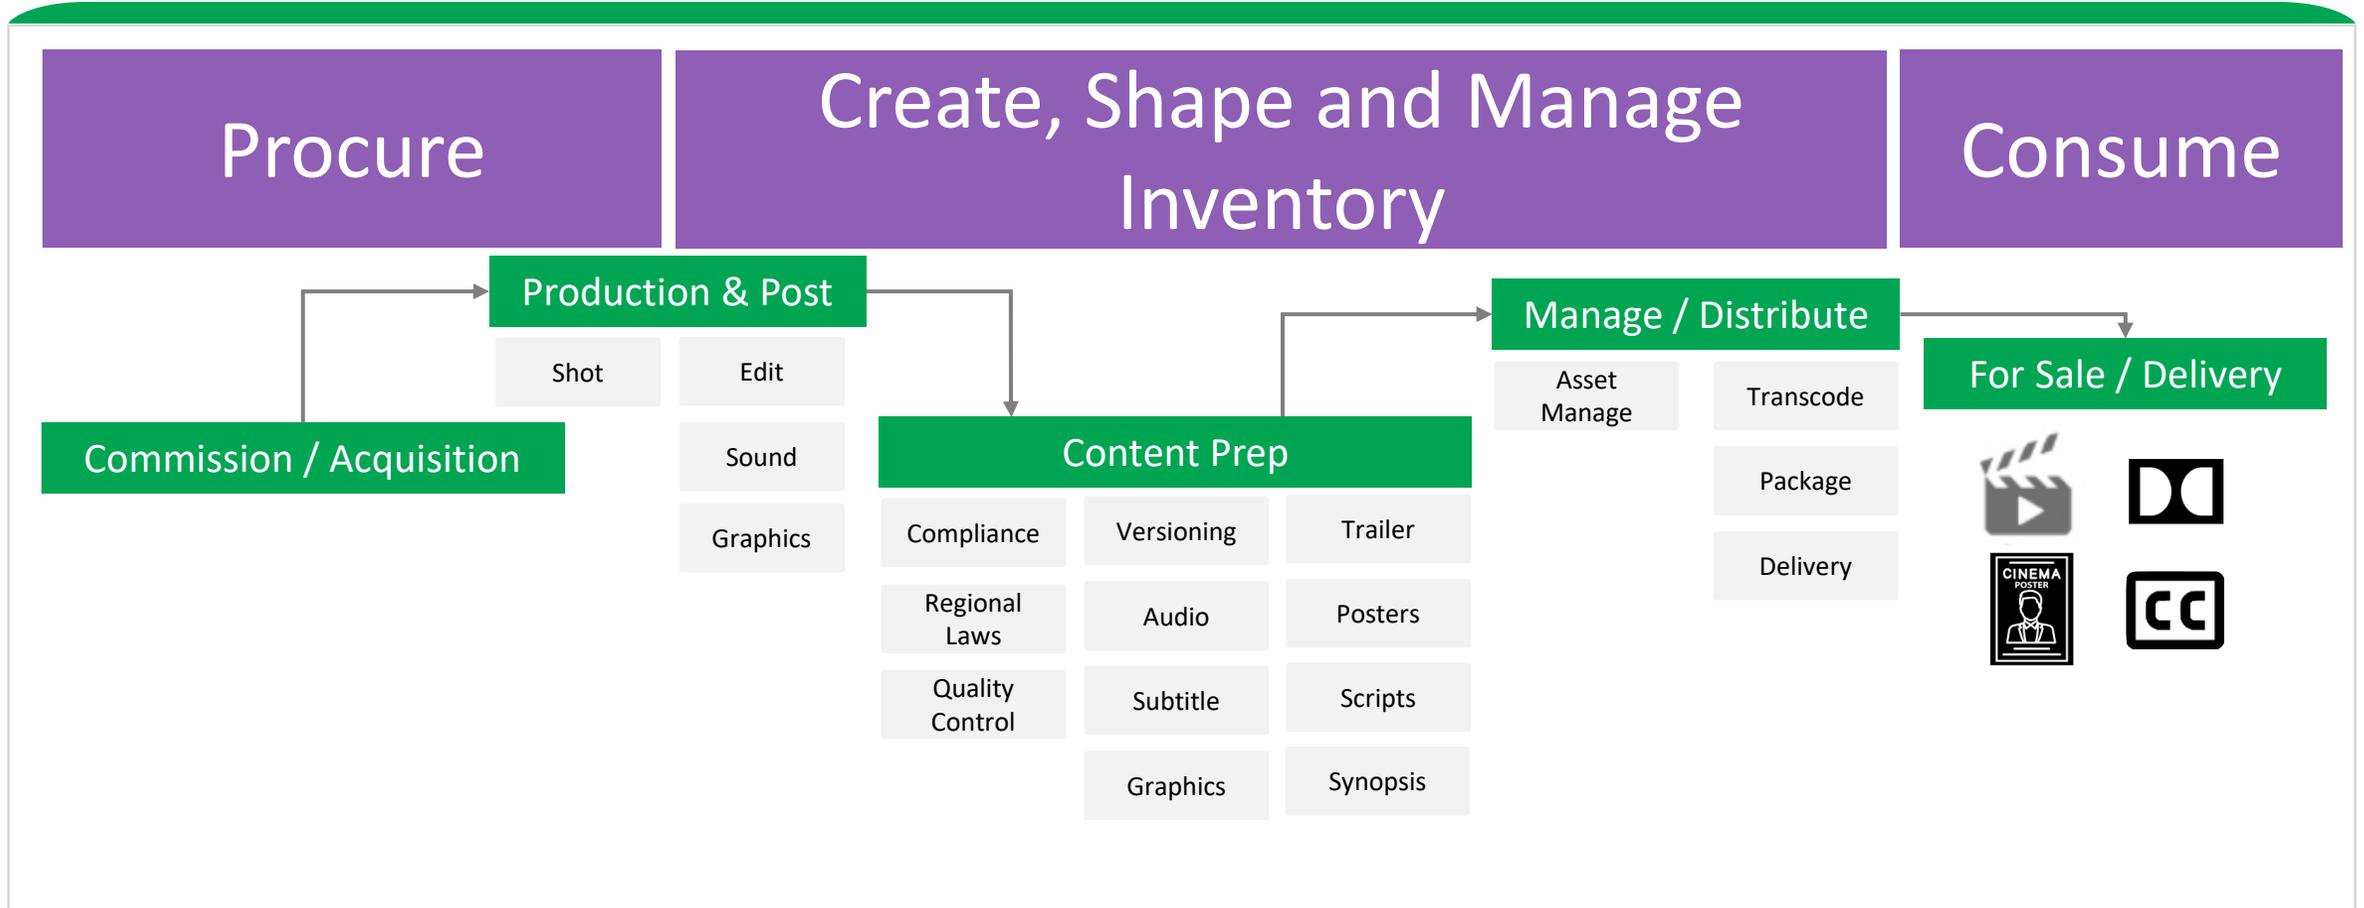

- Software defined and use commodity applications and infrastructure
- Some companies have tried to put Supply Chain theory into practice
- Implementing Next Gen supply chains can no longer be regarded as fanciful
- COVID : Lessons learned by early adopters will become of huge relevance to others

## Scaling through Automation : Making human intervention the Exception

### KEY INSIGHTS

- Companies are automating workflow from receipt to distribution
- Exception based reporting is key to these workflows
- Deployment tends to start small but build out at speed
- Submission of content to the cloud is an important starting point
- Currently these content portals are where next gen supply chains begin

# Media Supply Chain | It Doesn't Change

# State of Affairs

- MSC is working, but is it optimal?
- Content Discovery – What do you have?
  - Quality Control – Is your content up to Consumer Demands
  - Metadata – a First-Class Asset
- Global Volume – How much time do you have
  - Increasing demand to fill - Managing Output and Onboarding
- Human Capital Investment – What's Important
  - What are you plans for reducing Operational Cost?

## Agenda

- Background
  - **Foundation for Modern Supply Chain**
  - Delivering a Modern Media Supply Chain
  - 11 Step Guide to Business Efficiency
- 

# Foundation for Modern Media Operations

Automated

Consistent

Precise

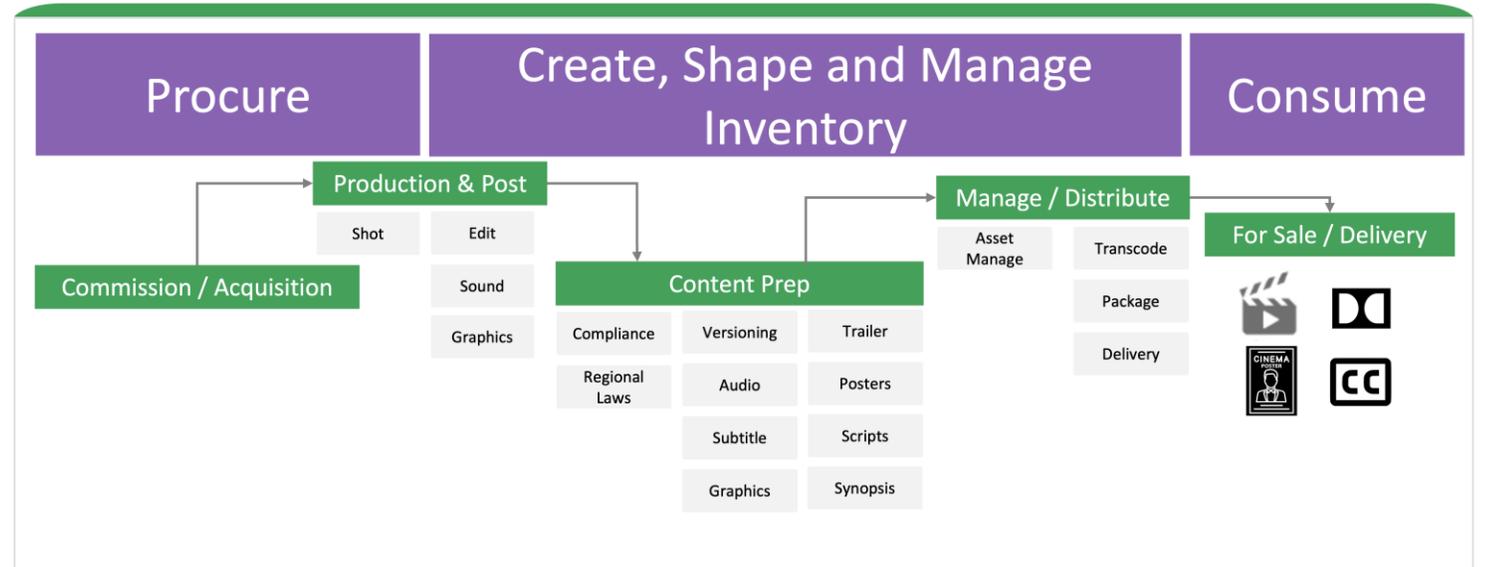

One Operation

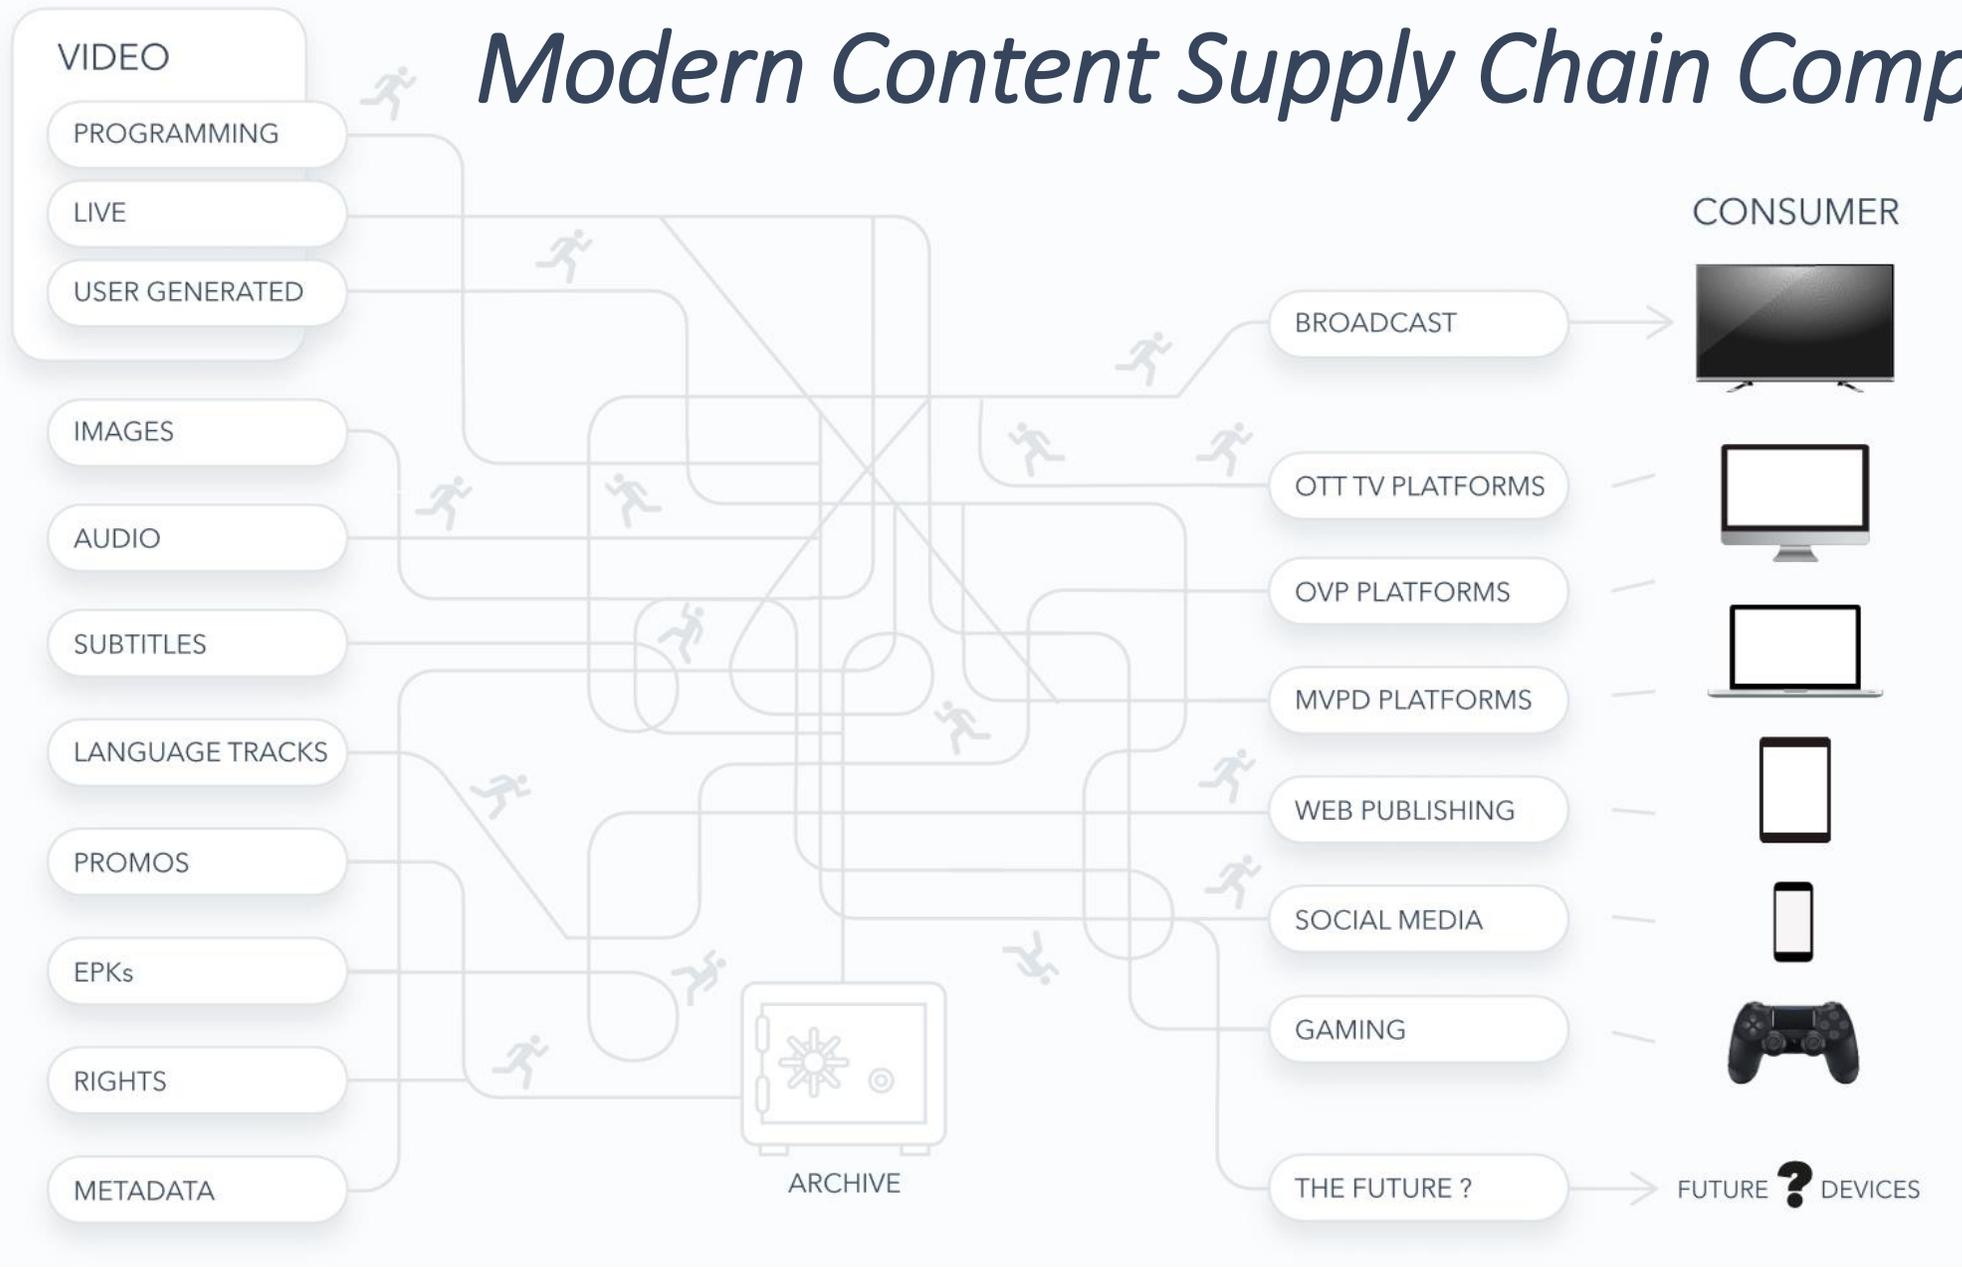

Location Agnostic

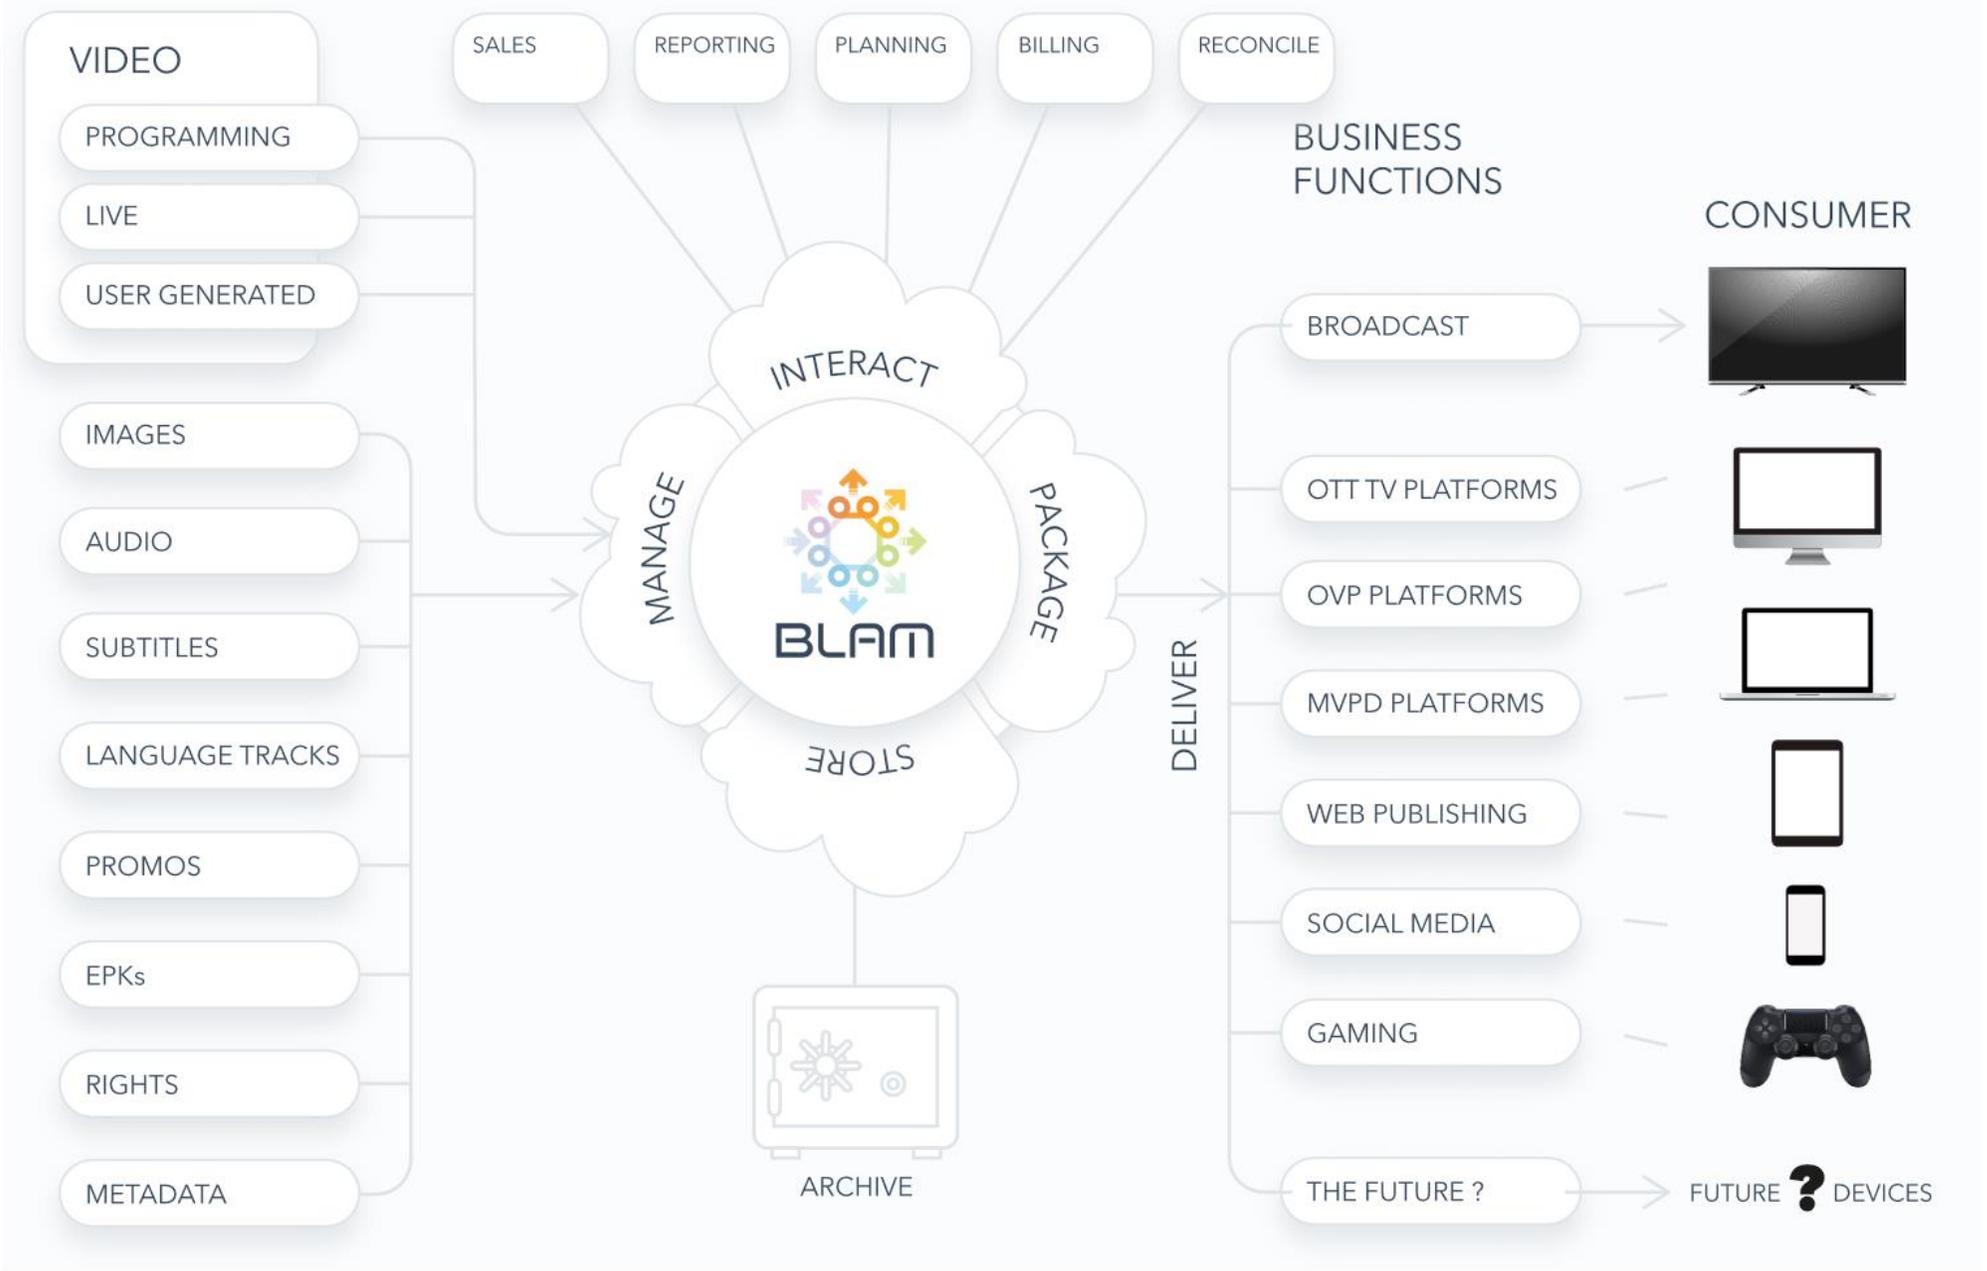

Manage by Exception

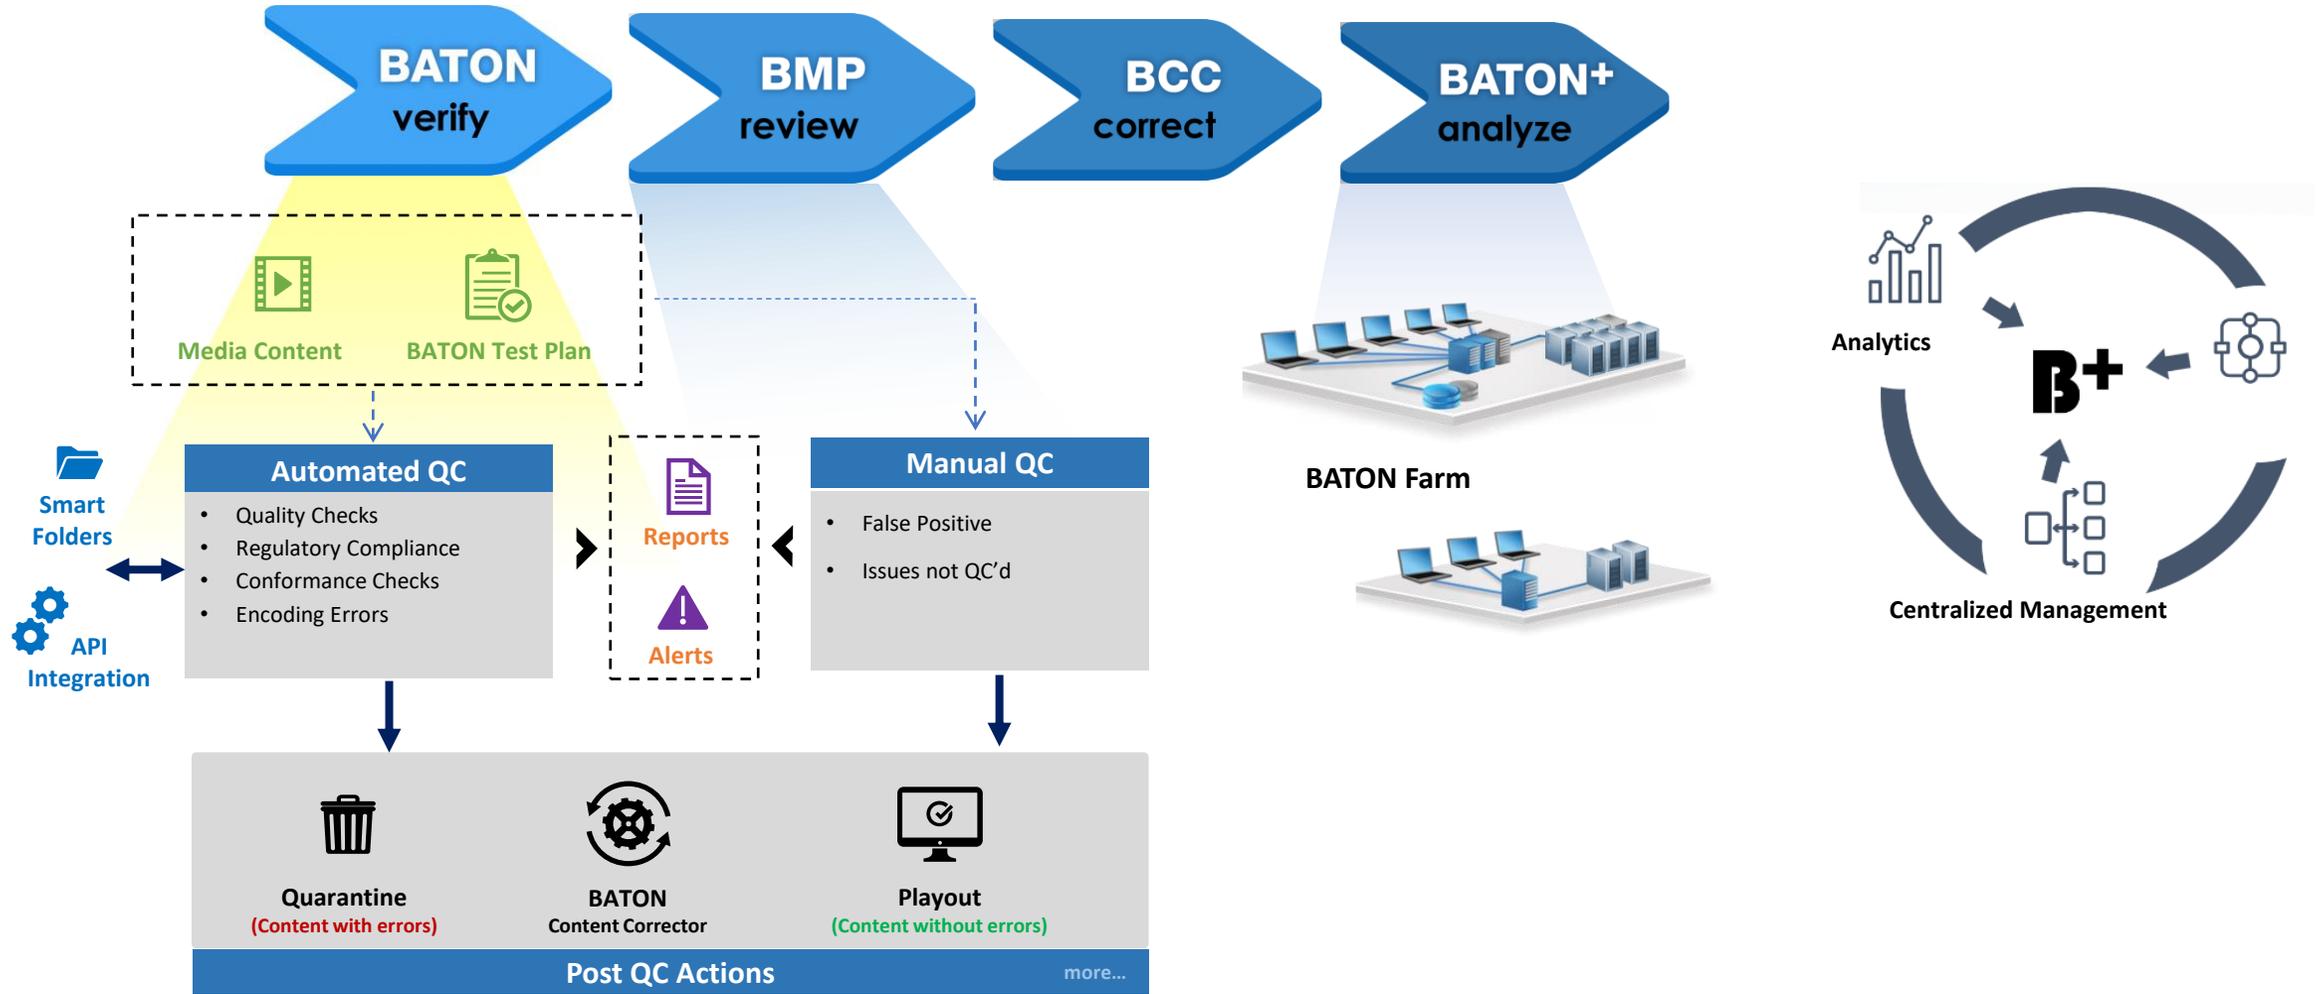

# Modern Content Supply Chain Complexity

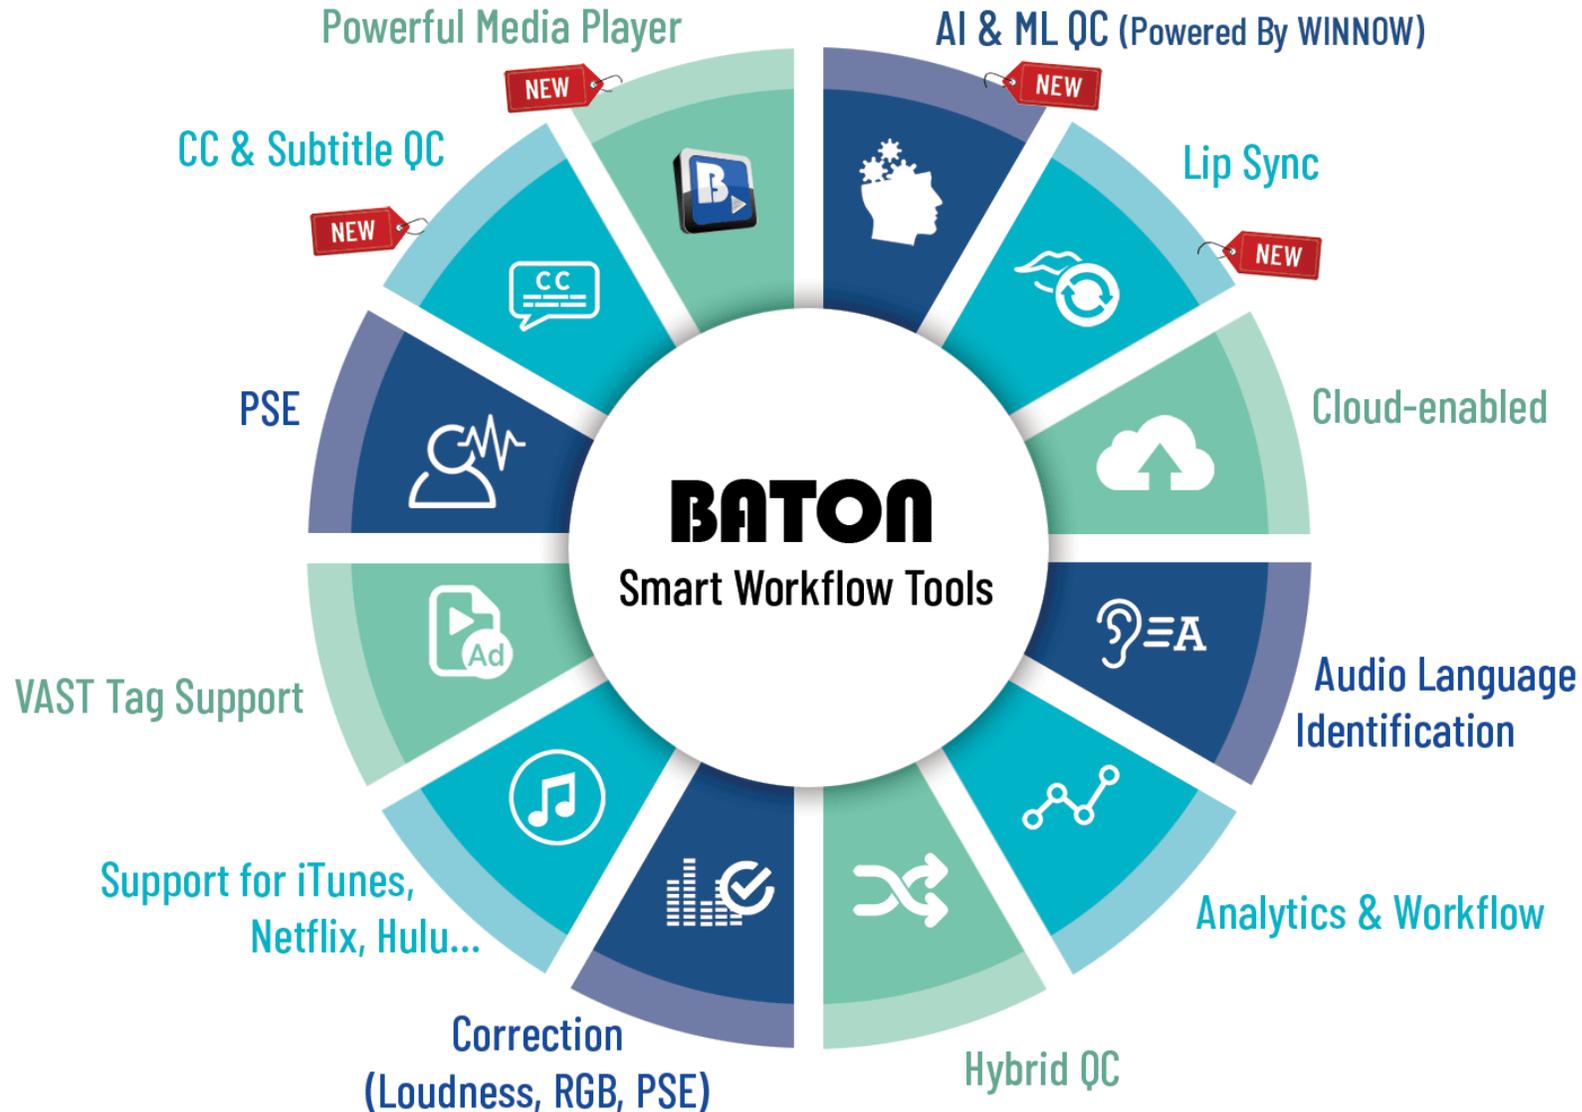

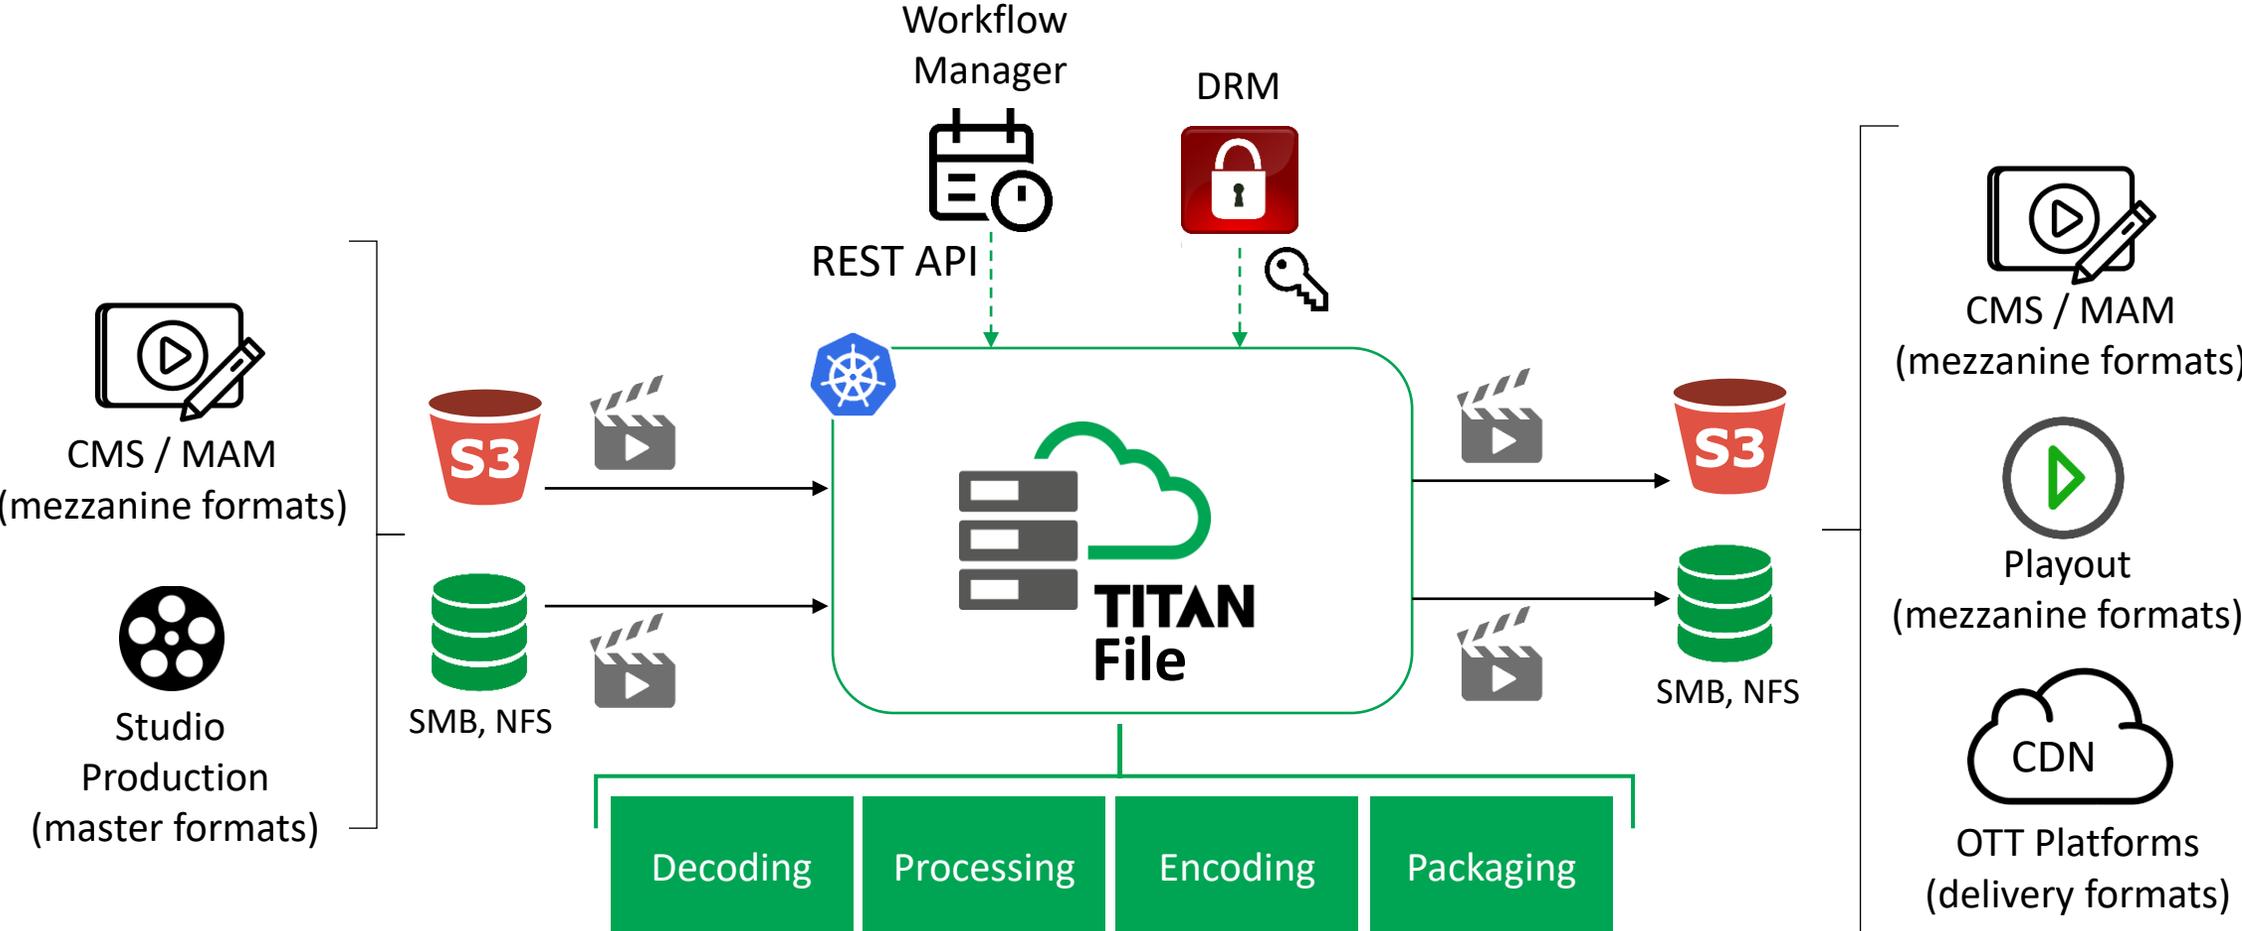

# BATON | Usage Model

# BATON | Smart Workflow Tools

# TITAN File Supports A Wide Range Of File Workflows

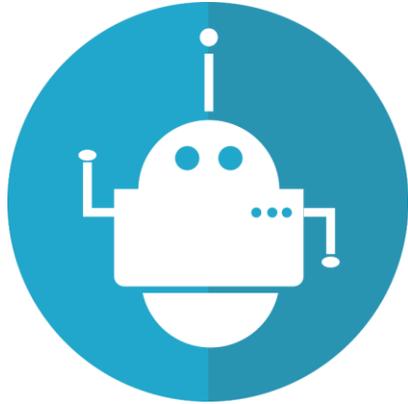

## Agenda

  - Foundation for Modern Supply Chain
  - **Delivering a Modern Media Supply Chain**
  - 11 Step Guide to Business Efficiency
- 

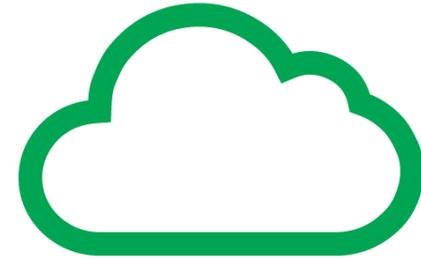

# Delivering Modern MSC, Today

Automate  
workflows

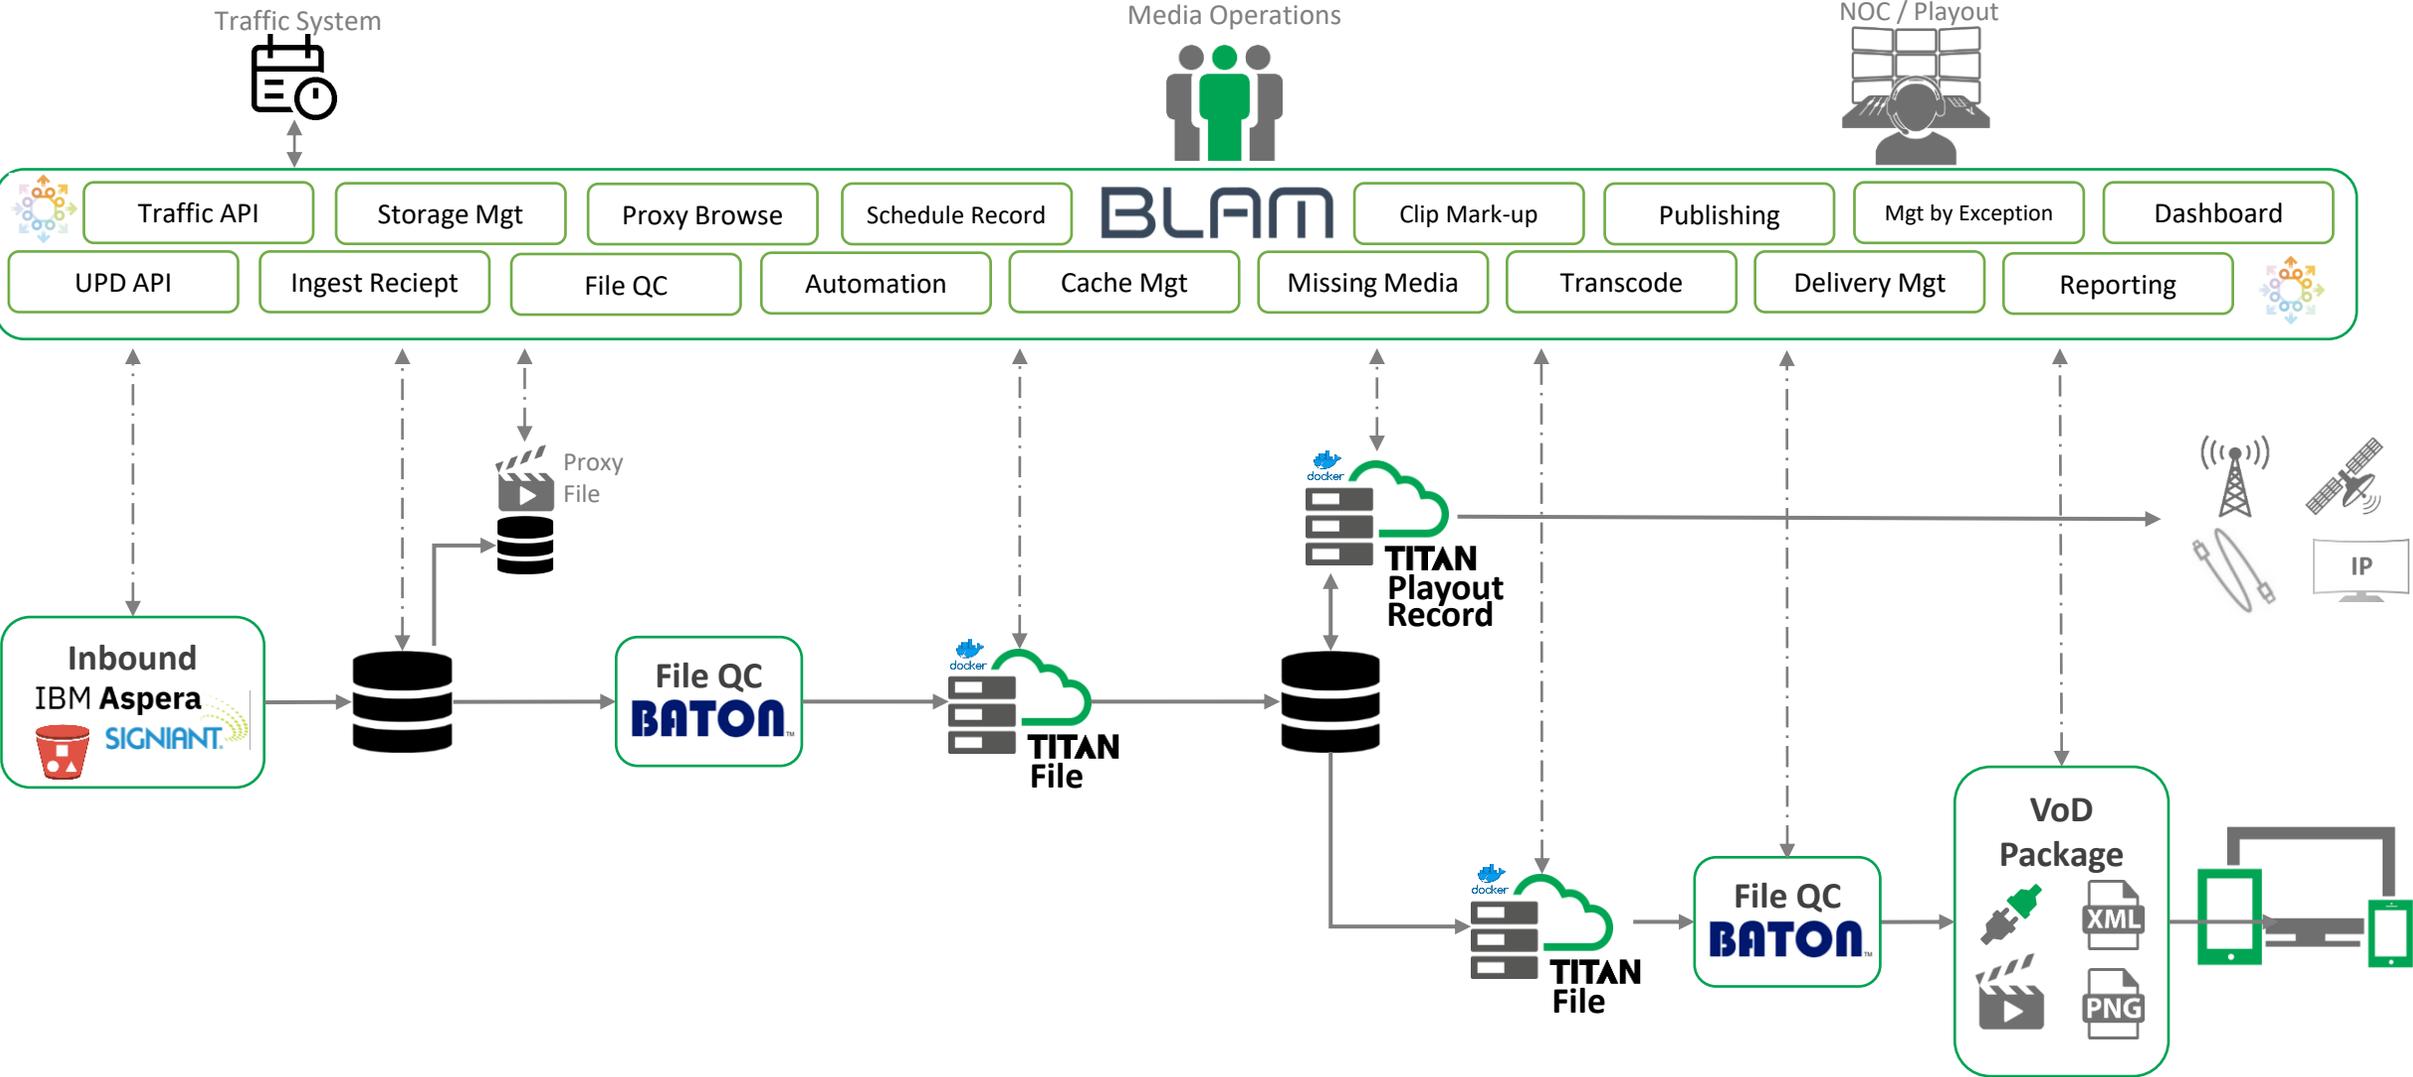

Manage by  
exception

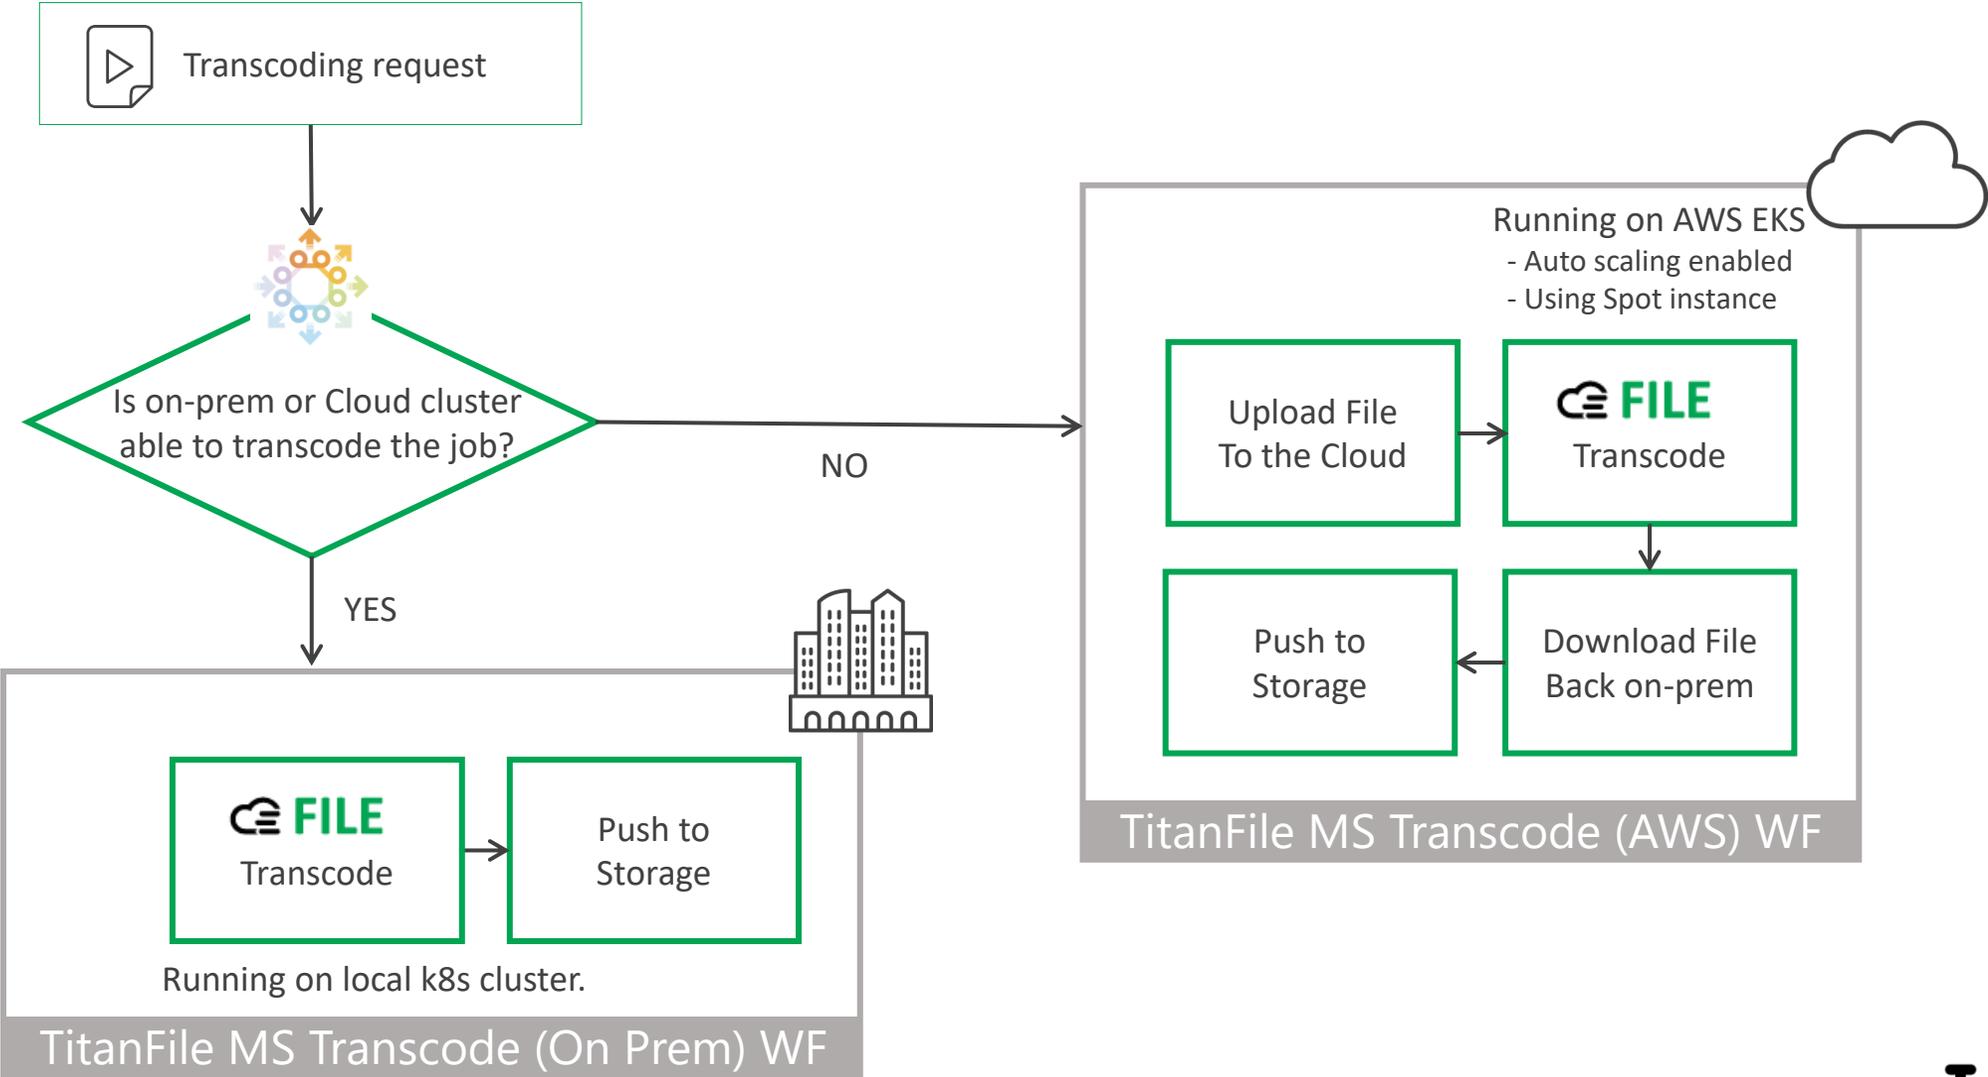

Deploy  
anywhere

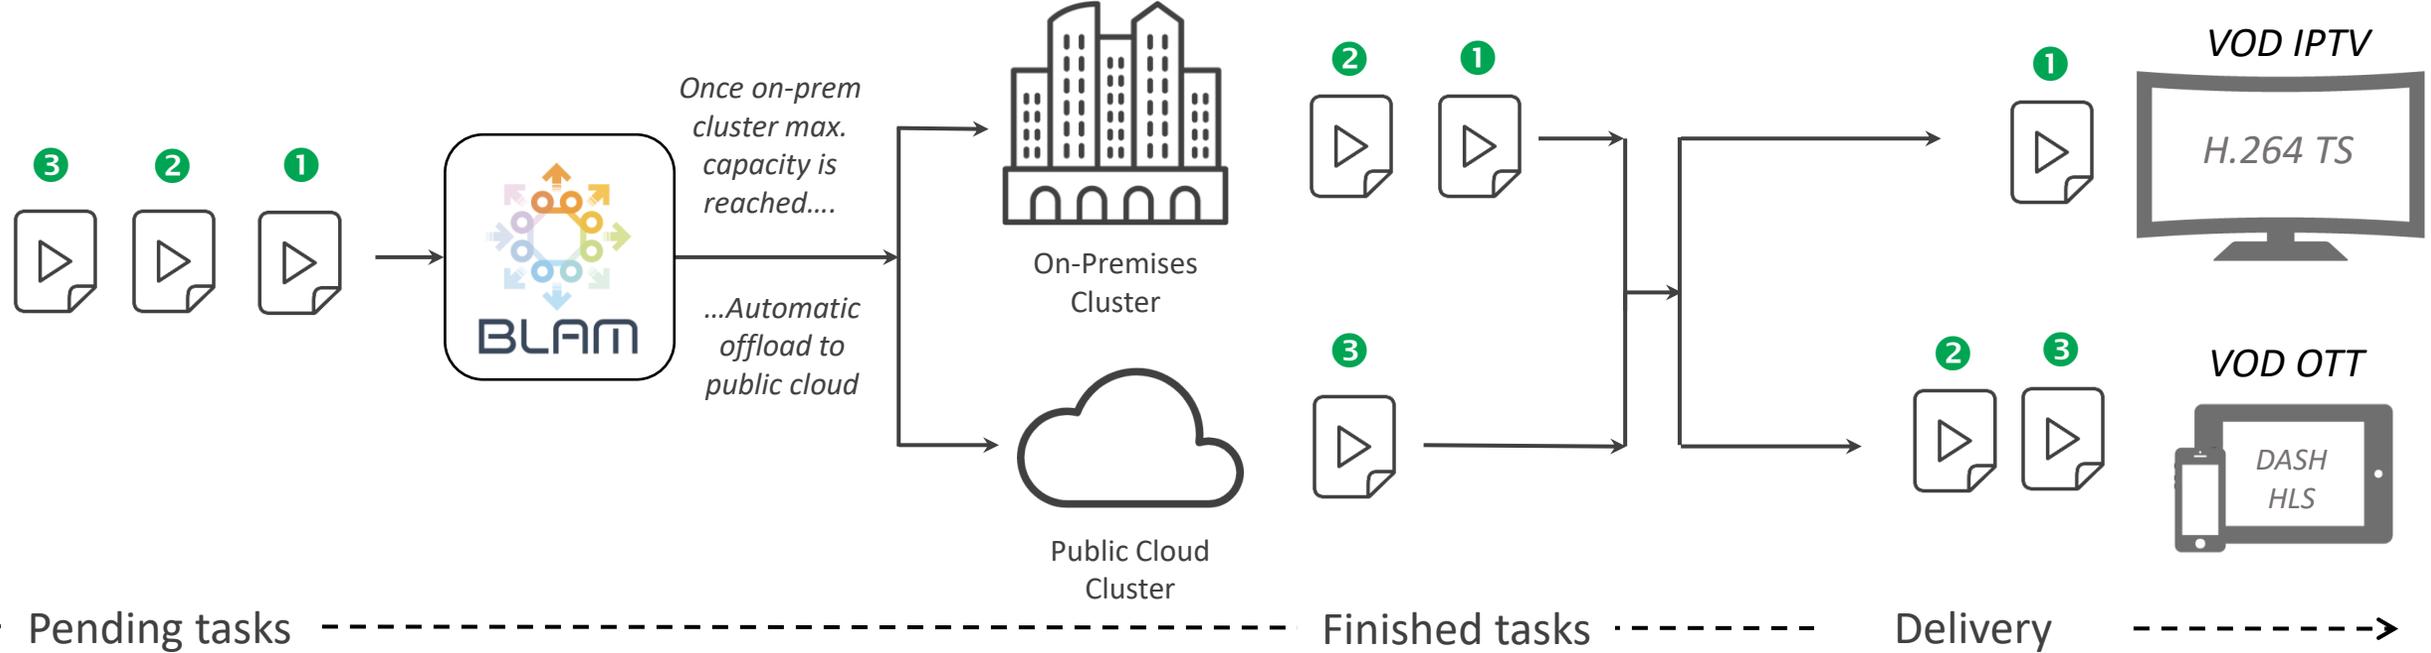

# Work | In Control

# Scheduling Based on Location or Jobs in queue

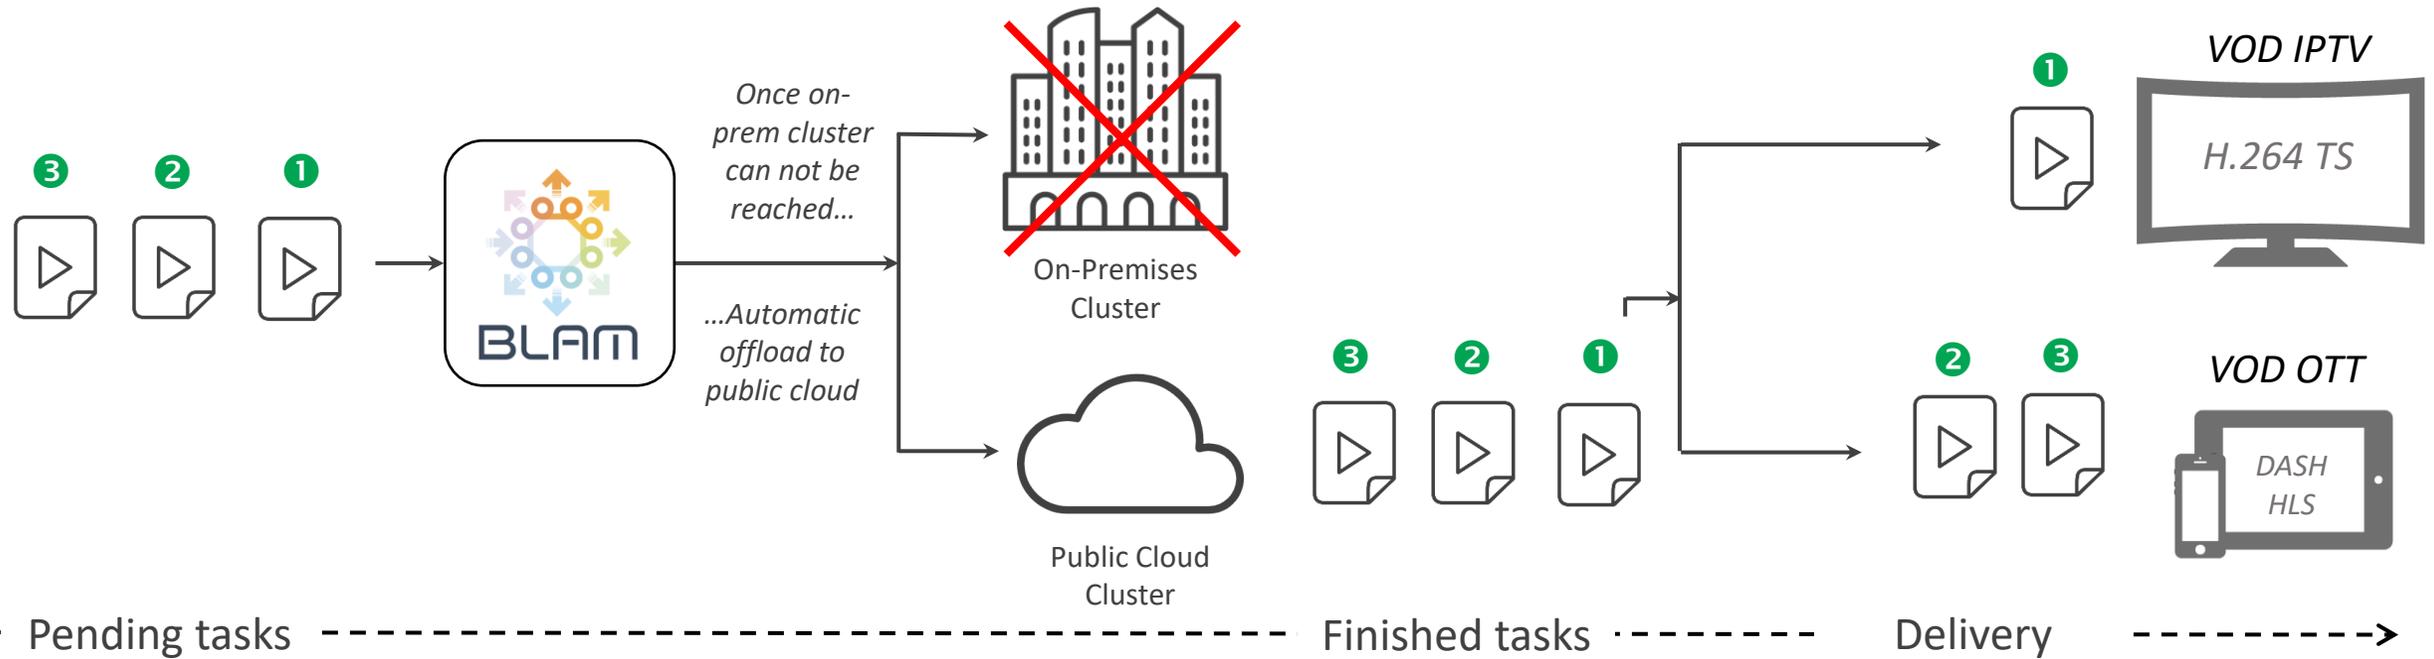

# Workflow - Offload of File Transcoding to Public Cloud

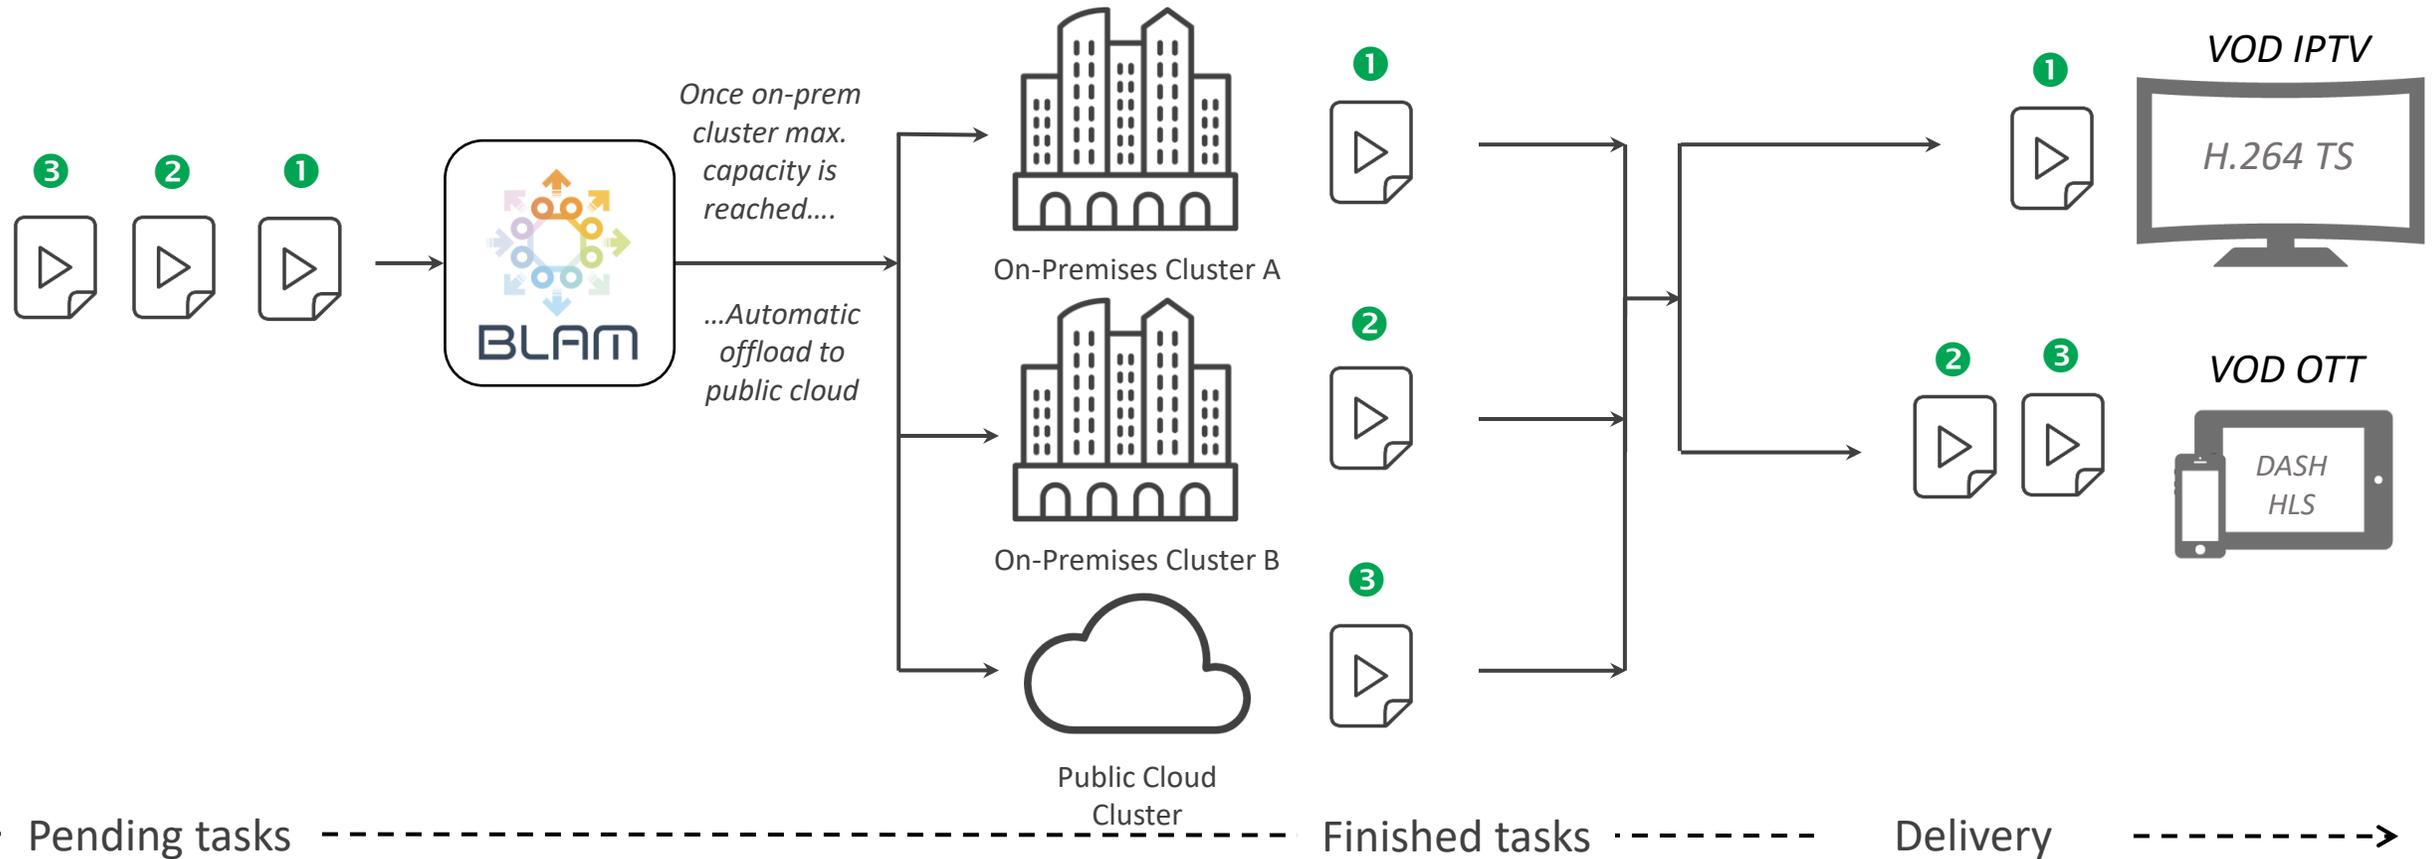

- Task #1 and #2 are transcoded on-prem
- On-prem cluster maximum capacity is reached
- Task #3 is transparently offloaded to public cloud clusters

# Disaster Recovery to Public Cloud

- Task #1 and #2 are transcoded on-prem
- On-prem cluster maximum capacity is reached
- Task #3 is transparently offloaded to public cloud clusters
- **This workflow can also use for Disaster recovery.**

# Can add 3 or more clusters and run transparently.

- Can add more clusters.
- The deployments getting very flexible.

## Agenda

- Background
  - Foundation for Modern Supply Chain
  - Delivering a Modern Media Supply Chain
  - **11 Step Guide to Business Efficiency**
- 

**Reducing operational overhead costs**, enabling business logic, metadata driven automation for media capture, ingest, manage, enrich, store and delivery.

Schedule aware prioritization of workflows, **ensuring service level** requirements are met.

**Lowering opex** by reducing 'eyes on' QC, automated file quality control with simplified visualization.

**Reducing storage cost** through efficient use of centralized storage management including automated processes for optimization and archiving.

Management of resources to provide **load balancing and resilience** and **business continuity**

**Powerful workflow configurations** supporting a **nimble operating model**.

**Migrate and Integrate business wide** workflows to reduce and then **eliminate silo workflows**

**Cloud native:** Public Cloud, On-Prem and Hybrid

**Management insight**, dashboards updated in real time, from overall operation or specific workflows.

**Powerful reporting tools** provide detailed management information to support **capacity and workload planning**.

# Guidelines for Your Next Gen Supply Chain

## Focus on Your Operation

### ✓ **Connect Disparate Systems:**

- Connect production and business systems to provide broad visibility and enable 'low friction' business operations.

### ✓ **Create Efficiencies through Automation:**

- Enable the controlled migration of production and operations to new service models, On-Prem, Public or Hybrid Cloud.

### ✓ **Reduce operational costs and exploit new revenue opportunities:**

- Enables legacy archives and future media requirements to capitalize on current and future multiplatform presence.

THANK YOU
